

Veeam ONE for VMware

Powerful, easy-to-use and affordable monitoring and reporting

Veeam ONE is a 2-time Best of VMworld award winner and the 2012 Reader's Choice Award winner for Virtual Management & Optimization from Virtualization Review.

"Organizations need monitoring and reporting solutions that can take into account the nuances that virtualization introduces."

Gartner *Cameron Haight
Research Vice President*

"The predefined dashboards and widgets are a great way to quickly see what's happening in my virtual environment. My days are busy, so being able to get all the information I need at a glance is really helpful."

*Joern Westermann
Technical Director
noris network AG*

Veeam ONE have been verified by VMware as VMware Ready.

Veeam is an Elite VMware Technology Alliance Partner and a charter member of the VMware Ready Management program.

Virtual environments are best served by management tools built especially for virtualization. Veeam® Software brings recognized virtualization management expertise to VMware with Veeam ONE™.

The right tool

"Virtual first" is becoming standard deployment policy, and many organizations are finding their virtual environments growing busier and more complex every day. Staying on top of your infrastructure can be a time-consuming task. You need the right capabilities to manage your environment efficiently and effectively:

- 24x7 real-time monitoring, with at-a-glance and drill-down views of health, performance and workload
- Capacity planning and change tracking
- Documentation of the virtual infrastructure
- Automated and on-demand management reporting

"After looking at a number of virtualization management products, we decided Veeam ONE was our best choice. It's easy to deploy and comes with so many features that work right out of the box. We get views and reports that give us visibility of our entire infrastructure. And in addition to tracking performance metrics and alerts, we can monitor snapshots, vMotion events and even our own Veeam Backup & Replication jobs."

*Dave DeLollis
Senior Systems Administrator
Hanover Hospital*

Powerful and easy-to-use

Veeam ONE delivers out-of-the-box capabilities that let you immediately experience the benefits of effective monitoring and reporting. With deployment in under 15 minutes and features that include automatically triggered data collection, prebuilt alarms, dashboards and reports, and an extensive knowledge base, you'll be satisfied with a solution that's easy-to-use and powerful, all in ONE.

An affordable solution

Veeam ONE delivers a comprehensive solution at a competitive per-socket price. Watch your ROI grow as you leverage the power of effective virtualization management to improve application performance and availability, allocate resources more efficiently and increase consolidation ratios, all while reducing administrative overhead.

Proven technology

Integrating the proven technology of Veeam Monitor™, Reporter™ and Business View™ into a single solution, Veeam ONE delivers powerful, easy-to-use and affordable monitoring and reporting for VMware and Veeam Backup & Replication. Organizations enjoy immediate benefits from built-in intelligence and out-of-the-box capabilities that enhance the protection, performance, availability and utilization of their virtual and backup infrastructures.

Capacity planning

Advanced analysis takes the guesswork out of capacity planning. Veeam ONE examines trends, identifies over-committed resources and offers flexible what-if modeling. The result is reliable threshold forecasts and provisioning recommendations that help you make well-informed decisions regarding the growth of your virtual infrastructure.

Change tracking

The virtual infrastructure is highly dynamic, and changes can come from administrators or vSphere itself. To keep you on top of your environment, Veeam ONE tracks the who, what, where, when and how of every change in your VMware infrastructure.

Business categorization

Veeam ONE enables technical- and business-oriented views of the virtual infrastructure. Monitor and report on dynamically built groups of hosts, clusters, virtual machines and datastores that are categorized by business unit, geographic location, department, service level or other criteria you define.

Supported VMware environments

Platforms:

- vSphere 5.x and 4.x
- VMware Infrastructure 3.x (VI3)

Hosts:

- ESX 4.x and 3.5
- ESXi 5.x, 4.x and 3.5
- vSphere Hypervisor (free ESXi)

Software:

- vCenter Server 5.x and 4.x (optional)
- Virtual Center 2.5 (optional)

Supported backup environments

Platform:

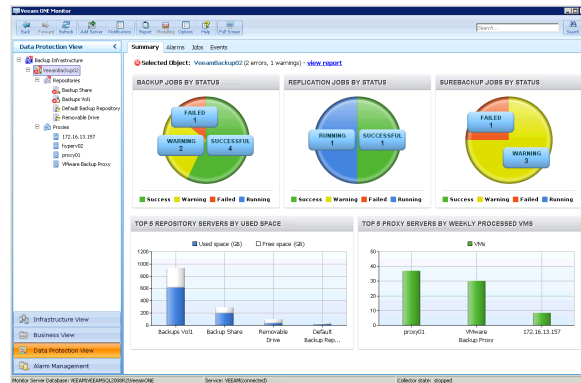

- Veeam Backup & Replication 6.5

Software:

- Backup server
- Enterprise Manager (optional)

Integration with Veeam Backup & Replication

Veeam ONE extends its capabilities to the backup infrastructure with advanced monitoring, reporting and capacity planning for Veeam Backup & Replication™. Know your critical VMs are protected, optimize backup resources and automatically document backup status when you integrate your backup environment with Veeam ONE.

Veeam ONE provides at-a-glance views of backup health and resource utilization.

Powerful performance analysis

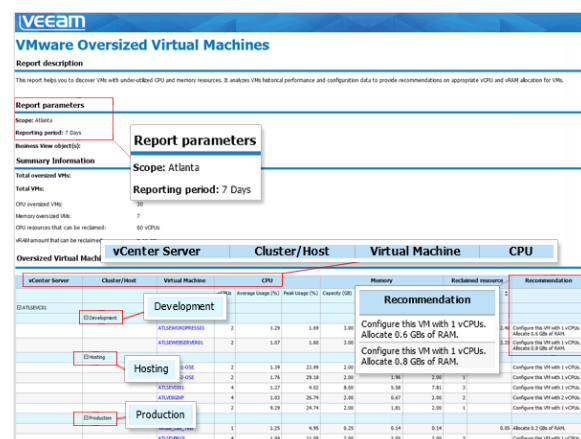

Virtualization comes with a lot of metrics, and many factors interact to affect the performance and availability of your virtual environment. Veeam ONE gives you a complete view of the demands on your virtual infrastructure with performance charts that graph logical groups of interrelated metrics.

Intelligent alerting and fast troubleshooting

Veeam ONE makes sure you're the first to know when problems occur and you have the information you need to fix problems quickly. With over 130 alarms built specifically for VMware and more for Veeam Backup & Replication, Veeam ONE begins working right out of the box to monitor your virtual and backup environments. When troubleshooting an issue, alarm dashboards with single-click drill-down let you quickly access the object details, performance data, and knowledge base information you need to resolve those issues fast.

Resource optimization

As your virtual environment grows, it can be difficult to keep track of where and how resources are used. You'd prefer not to wait for disaster to strike before finding out resources are poorly allocated, and you'd also like to know you're consolidating as efficiently and safely as possible.

Veeam ONE provides the data and guidance you need to optimize resource allocation and utilization.

With right-sizing reports and other built-in resource optimization capabilities, Veeam ONE lets you view and analyze up-to-date information about under- and over-sized VMs, active snapshots, garbage files, and idle templates and VMs. Detailed displays identify unused files and obsolete objects, and recommendations spell out how to reclaim and reassign over-allocated resources.
